## 1. Overview of Project: -

- In today's technologically advanced era, we have an online service for everything. Right from booking a cab to [ordering your favorite food](#) or even [booking laundry services](#), everything can be done with just a few clicks. So why not have an online order and delivery platform for liquor delivery as well? After all, the liquor industry is one of the greatest markets in the world.
- Billy's BrewStires offers wine and spirits, craft beer is their specialty. Its aims to please and considers all customers like family. Its goal is to build relationships and service is a top priority.
- Billy's BrewStirs was started in 2019 by a beer enthusiast, the store has continuously grown, making available new type and brand of craft beer at the store to provide the greatest selection for the customers. Billy's delivers at flat rate regardless the size of the order.

## **2. Objectives: -**

- To develop a system that will surely satisfied the customer service.
- To design a system able to accommodate huge amount of orders at a time.
- To evaluate its performance and acceptability in terms of security, user-friendliness, accuracy and reliability.
- To automatically compute the bill.

### **3.1. Existing System: -**

Previously Liquor purchase could only happen at the stores, where we have to wait for our turn to order and then receive, it was quite a time consuming process.

In today's technologically advanced era, we have an online service for everything. Right from booking a cab to ordering your favorite food or even booking laundry services, everything can be done with just a few clicks. Similarly, it is made possible to purchase Liquor online and get it delivered at home within minutes.

Currently existing systems have updated themselves from the orthodox selling form to the advance selling form which has brought enormous amount profit to their pockets.

### **Limitations of Existing System: -**

- No feedback option is provided to customers.
- No proper delivery kits are provided for the products which leads to leakage and damage of the product.
- Delivery time is not fixed; customers are made to wait more than promised time.
- Product prices are over-rated and no standard presentation of the product cases.

## **3.2. Proposed System: -**

- Billy's BrewStirs is a liquor bar and restaurant, craft beer is their specialty. Various types and flavors of craft beer are available with us which we serve on both the platforms – online and offline.
- Billy's online delivery system consists detailed information about Billy's BrewStirs, various craft beers available and information about them such as their type, contents, flavors, ingredient ...etc.
- Customers can have detailed description about craft beers, learn and select a best fit for them; Can order through our business What's app account, an icon is provided for the service. Two Payment modules are available, first is the cash on delivery and second is thorough online platforms (paytm, UPI, Gpay ...etc.).

## **Advantages Of Proposed System Over The Existing System**

- Customers can easily use the web-application.
- The web-application is compatible and responsive to all the devices.
- Feedback option is also provided to improve the service and quality of products.
- Administrators can see all orders and maintain database of delivery.
- It's time saving as well as more effective than other platforms.
- Product delivery is done in promised time.

## **4. Modules Of Project: -**

- There are mainly 2 modules in this project:

### **a) User Module:**

- 1) User Registration Module
- 2) User Log-in Module
- 3) User Sign-in Module
- 4) Online-Order Module
- 5) User Logout Module

### **B) Admin Module:**

- 1) Admin Log-In Module
- 2) Admin Sign-In Module
- 4) Admin View Order Module
- 5) Admin Log Out Module

## **5. Requirements: -**

### **a) Operating System:**

Microsoft Windows 10 Pro

### **b) Software Requirements:**

- 1) Technology Implemented – Html , Css , Js , Php
- 2) Database Used – MySQL
- 3) Browser – Chrome
- 4) Web Server - Wamp

### **c) Hardware Requirements:**

- 1) Processor Name – Intel Core i3
- 2) Processor Speed – 3.4GHz – 4.2GHz
- 3) RAM – 4.00 GB
- 4) Hard Disk Capacity – 931.50GB
